

Grizzly is one of the largest independent, development- stage oil sands company in Alberta, holding in excess of 800,000 acres of in-situ oil sands leases. We are fully funded through startup of our first phase of the Algar Lake project in 2013. Grizzly is building a development and operations team to plan and execute a large portfolio of future projects.

Grizzly Oil Sands is building our team. Do you want to work for an organization where you will play a part in creating the future of an expanding organization? If you have the desire to contribute your expertise and ideas, consider the following opportunity at Grizzly Oil Sands.

Job Title: Unit Operator(s) - Ref ID: 58

Closing Date: October 15, 2014

Job Overview:

The Unit Operator at Grizzly Algar is required to work a 7 and 7 shift rotation while living in a camp setting when on shift. Grizzly offers wage subsidies for shift work and has a wage scale depending on experience and steam certificate held.

Job Location: Algar Lake 1 SAGD Project

The Algar Lake 1 Project is located 40 km's South West of Fort McMurray. This Grizzly Oil Sands Project will implement the use of Steam Assisted Gravity Drainage (SAGD) technology to extract 10,000 barrels/day of bitumen over the life of the Facility.

Responsibilities:

- Should have a good working knowledge of Thermal SAGD operations
- Troubleshoot operational problems and be involved with other team members to provide corrective actions
- Proper start-up and shutdown of equipment for maintenance repairs
- Mentor and train other operations staff as required

Qualifications:

- 2nd Class Power Engineering Certificate or working towards a 2nd Class Power Engineering Certificate
- Relevant plant operating experience is required. SAGD plant/field operating experience is preferred
- Good working knowledge of drum boilers and evaporators would be a definite asset
- Effective interpersonal skill and a strong ability to communicate with other team members
